## Profile

Backend developer with 4 years of experience who enjoys expanding skills into frontend and DevOps. Passionate about effective communication and creating synergy within teams. I approach software development not just as coding but as product creation with responsibility for the end result.

## Employment History

### Purple IO - May 2023 - Present

#### [Product Management System Development (Kolon Mall)]

- Developed full-stack product management system for Kolon Mall fashion platform, handling 1M total products with 100K daily updates
- Implemented integrated platform using Amazon Kinesis and Lambda for system connectivity across multiple stakeholders (admins, manufacturers)

#### [Product Review Management System Development]

- Enhanced review system processing ~1,000 daily reviews with admin curation features for featured collections
- Optimized search performance through OpenSearch integration with time-based batch processing

### Trevari - July 2022 - December 2022

- Maintained and enhanced features for a reading club platform
- Automated coupon issuance system using AWS SNS/SQS event-driven architecture
- Enhanced system reliability through diversified product support and structured payment processes

### Enliple - September 2020 - March 2022

#### [Ad Frame Selection and Placement Development]

- Optimized ad layouts across industries to maximize click-through rates, processing 15M daily data entries
- Implemented solutions using Spring Batch TaskLet methodology for efficient data handling

#### [Ad Recommendation System Operation and Improvement]

- Managed behavior-based ad recommendation systems utilizing 500M daily user interaction records
- Developed remote batch control via Telegram and implemented partitioned data storage for analytics support
